

Spackazzle by Joseph D. Smith

Both players are dealt two cards, then they begin a series of swaps.

- The player with the lowest card gives it up to the opponent, then that person with the highest card in their hand is given their highest card to their opponent.

- Compare hands.

- Whoever has the highest number wins.

BUT;

Instead of an Ace and a 4 equaling 5, you would combine the numbers to make 14.

For regular playing card decks.
